

Magnetic Probe

Description: The Greenwood Easy Clean Magnetic Probe is designed for sampling products for metal contamination. Used at critical points throughout the production line, it is ideal for free flowing powders, granules and liquids. The stainless steel encased rare earth magnetic tube will attract ferrous contamination as it is passed through the product which can then be sent for analysis. Manufactured to food industry standards, it is light-weight and easy to handle. It can also be cleaned quickly and efficiently by releasing the catch and sliding out the magnetic inner tube which causes the contamination to fall away.

Features

- Easy clean removable outer sheath
- Quick release catch
- Light-weight and easy to use
- Ideal for ferrous swarf removal in contamination sensitive areas

Specification

- High intensity magnetic field
- Standard length 200mm (with handle)
- Manufactured to food industry standards
- Maintenance free
- Manufactured to any length
