

## Magnetic Tubes

**Description:** Greenwood magnetic tubes are a simple low cost form of magnetic separation. Used in a variety of industries from food or plastics processing to chemical and powder processing, they can be easily installed into machinery or assembled according to the wishes of the customers. Encased in either 304 or 316 stainless steel tubes 25.4mm diameter, we offer them with either standard ferrite magnets or high intensity rare earth magnets (**up to 11,500 gauss**). We manufacture them specifically to the length requested by the customer. The sealed stainless steel ends are drilled and tapped for fixing purposes.

## Features

- All stainless steel encased
- Manufactured to virtually any length
- Available with powerful rare earth magnets
- Tapped ends to your requirements
- Simple to install
- Easy to clean
- Can be supplied assembled in the form of a Magnetic Grid
