

## Pipeline Magnet

**Description:** The Greenwood Permanent Magnetic Pipeline Magnet is designed for the extraction of fine ferrous particles such as rust from fluids conveyed by pipeline. Manufactured in 304 or 316 stainless steel, the unit is simply connected to the existing pipeline via flanged or threaded ends. Sealed magnetic sticks containing rare earth magnets filter the flow and extract the unwanted ferrous metal. Simple and easy access is possible using the quick release lid. Available with high intensity rare earth magnets (**up to 11,500 gauss**).

## Easy Clean Pipeline Magnet

We also manufacture easy-clean versions with a sliding outer sleeve for fast and easy contamination removal.
